Records of the Nanophyid Weevils (Coleoptera, Nanophyidae) from the Oki Islands, off Western Honshu, Japan

Junnosuke KANTOH and Hiroaki KOJIMA

Laboratory of Entomology, Tokyo University of Agriculture,
1737 Funako, Atsugi, Kanagawa, 243-0034 Japan

The weevil fauna of the Oki Islands has poorly been studied, and a total of 79 species are presently known from the islands (KADOWAKI, 1983; FUKUI, 1988; HAYASHI *et al.*, 2006). No nanophyid weevil has ever been recorded from there. In this short paper, we record two species of the genus *Nanophyes* from the Island of Dôgo of the Oki Islands. We thank Mr. T. SHIMADA for the donation of specimens and his help in many ways.

1. *Nanophyes marmoratus* (GOEZE, 1777)
1 male, O-ike Pond, Saigô-chô, Dôgo I., Oki Is., 6–VIII–2004, T. SHIMADA (at light trap).
2. *Nanophyes pallipes* ROELOFS, 1874
1 male, same data as for *N. marmoratus*.
